**Subject:** Re: Enozo Devices Testimonial

Good morning Matt,

We utilize the Franke X1 (Ecolce) on 63 of our ice and water dispensers throughout the hospital. We do this as an additional line of protection for our patients and staff. Since we have been using them, there has been a considerable drop in bio growth in the ice and water dispensers. That has led to less down time, and less time spent performing our maintenance on the equipment. From my knowledge, we have not had a positive test of legionella in our ice and water dispensers since the use of the X1.

We also use the Spray Bottles as the last step to our cleaning and disinfecting process. We coat all the surfaces that would come in contact with the ice with the ozone spray to be sure we have done our very best for our patients. It is a very important part of our program.
